SIMPLIFY BUSINESS WITH TECHNOLOGY

Getting technology to simplify your business needs can make all the difference in terms of whether or not you are able to achieve long-term success. There are a number of ways in which technology can help you simplify business processes within your company, giving you access to more accurate data and ensuring you have a clear and accurate picture of your company at all times.

Business Integration

There is a great deal of untapped power in your organization and the correct application of technology to pool together your processes can transform your company into a far more efficient whole.

Are you tired of wading through twenty different spreadsheets to try and find the figure you need? If you simplify business by integrating your systems you can ensure that you are receiving relevant, accurate and complete data on your business operations with a few keystrokes, rather than a few hours with a calculator. System integration can simplify business tasks such as these, enabling you to focus on making right decisions based on the correct data.

By working to standardize and simplify business processes, we will help you to reduce costs, eliminate inefficiency and boost both profits and your capacity to handle new clients.

Process Automation

By automating your business processes you provide yourself with a wealth of benefits. Shortened cycle times, consistently followed procedures, improved capacity, faster delivery times and reduced costs are all advantages that come with using technology to simplify business.

INVEST IN THE RIGHT SOFTWARE

ACCOUNTING AND ERP SOFTWARE

At Criterion Technology, we specialize in understanding your business model and related processes. We pride ourselves in proposing the best business software to meet your company's needs. Recent years have brought a sea of change to business management software. While businesses have long considered accounting software a necessity, that mantle is increasingly taken by enterprise resource planning (ERP) software. So much so, in fact, that many are starting to use the terms interchangeably. Understanding the difference can help you compare accounting software and ERP software.

CLOUD VS IN PREMISE SOLUTIONS

At Criterion Technology, we consider our customers as our partners in business. We propose the best suited solution and deployment for your company's needs. While your company's information security is supreme, we recommend cloud based or in premise solutions based on what is best suited for your business processes.

SUPPORT
